

LÂM PHƯỚC LỢI

IT Engineer | Enterprise Systems & AI Integration

0857668241 | phuocloi1109.work@gmail.com

PROFESSIONAL SUMMARY

IT Engineer developing and maintaining applications for manufacturing and production support. Experienced in C#/.NET, Oracle SQL, ERP integration, industrial data capture and BI reporting. Connects production workflows with traceability, process monitoring and environmental data systems, with hands-on research into on-premise AI knowledge retrieval.

PROFESSIONAL EXPERIENCE

IT Specialist | Le Long Vietnam

07/2023 - Present

- **Manufacturing applications:** Develop and maintain C#/.NET WinForms systems for battery traceability, acid-filling monitoring, voltage/resistance measurement and environmental monitoring. Support production users and troubleshoot operational issues.
- **Industrial data and reporting:** Integrate PLCs and Keyence QR scanners for real-time production and measurement data. Maintain Oracle, MySQL and SQLite databases, Pentaho ETL synchronization and SAP BI Launch Pad reporting for line-efficiency analysis.
- **ERP and environmental workflows:** Develop T100 ERP and PHP APIs linking orders, finished products and component-level CO2 data for certification documentation. Design file-event and socket-based datalogger collection to replace repeated directory polling.
- **On-premise AI:** Research and customize a knowledge assistant using vLLM, LightRAG, LangGraph, Qdrant, Neo4j, Redis, MinIO and Docker for departmental and cross-department knowledge retrieval.

Back-End Intern | SeaTek

05/2022 - 08/2022

- Supported SOAP/Zimbra API integration for desktop email functionality and Firebase-based authentication.
- Supported desktop application setup, including macOS Monterey installation on Intel NUC hardware.

SELECTED PROJECTS

QR010 | Battery Production Traceability System

C#/.NET WinForms, Oracle SQL, MySQL, Pentaho ETL, SAP BI Launch Pad

- Developed and improved QR-based traceability across battery movement from casing through acid filling and final packaging.
- Integrated database, ETL and BI workflows for line-efficiency analysis and operational reporting; maintained and troubleshooted the system for production users.

VSF017 | Acid Filling Monitoring System

C#/.NET WinForms, SQLite, Oracle SQL, PLC Integration

- Collected acid-filling measurements from production equipment and validated results against process specifications.
- Visualized weight data and generated records for process monitoring and CPK evaluation.

TECHNICAL SKILLS

Enterprise systems & reporting: T100 ERP, Pentaho ETL, SAP BI Launch Pad; ERP integration, data synchronization, BI reporting

Programming & applications: C#, SQL, PHP, JavaScript (Basic), .NET WinForms

Databases & storage: Oracle, MySQL, SQLite, Redis, Qdrant, Neo4j, MinIO

Industrial integration: PLCs, Keyence QR/barcode scanners, REST/API integration, socket communication, event-driven data collection

AI & infrastructure: vLLM, LightRAG, LangGraph, OpenWebUI, Docling, Docker

AI-assisted development: Agent-to-agent workflows using Codex, Claude Code and Antigravity

Operations: Production support, application troubleshooting, database design, networking fundamentals; CO2 tracking and energy-cost analysis systems

EDUCATION & LANGUAGES

Data Communication and Computer Networks

2018 - 2023 | GPA: 2.98

English: Basic
